# WIRELESS;

## THE "TOBACCO" OF THIS DIGITAL AGE.

Thanks to technology. **Electromagnetic fields** (EMFs) are everywhere and in many forms, both natural and man-made. While natural EMFs causes little to no damage to the human system, an increasing number of studies over the last few decades have suggested a variety of adverse effects caused by steadily exposure to man-made EMFs.

We are surrounded by these harmful EMFs - from electricity to microwaves and more recently, mobile phones.

Thanks to technology again. **5G** network has now been introduced. This means; we have the **fifth generation** of internet communications technologies.

### 5G NETWORK CONSPIRACY

There are speculations by some folks on social media, blaming the **5G** for causing the pandemic that has already afflicted over 1.5M people and killed over 90,000 people.

Could this be an ugly coincidence or the hard truth?

**5G** launched in China, on **Nov 1, 2019**. Covid-19 begins in China. Then people start dying from Covid-19 in China.

That seems to be the argument. Something happened and then something else happened. **5G**, the technology that is supposed to make mobile and internet communications much, much faster.

The question is, **how could telecom possibly be related to the spread of a respiratory virus?**

Let's look at what other experts are saying about this theory.

**Brendan Thomas Carr**, an American lawyer who currently serves as a commissioner of the Federal communications commission. He previously served as an aide to FCC member Ajit Pai and as the FCC's general counsel. Carr also worked as a telecommunication attorney at the law firm of Wiley Rein, [tweeted \(4M followers\)](#);

[@brendan carr](#): Covid-19 is a virus spread by person-to-person contact, not radio waves.

**FCC, FDA, EPA, & others are all clear on the false claim that 5G is unsafe.**

Brendan Thomas Carr disagrees with the linkage of 5G and Covid-19.

Another variation of the conspiracy theory argues that radiation from 5G can weaken your immune system to the point that you are more easily infected by the COVID-19 coronavirus.

This **virus** is supposedly like love at first sight. It doesn't really exist. This conspiracy theory alleges that the radiation from 5G is actually what's causing the COVID-19 symptoms.

So there's no COVID-19 coronavirus. In other words, those pictures of the virus that you see on the news, the testing that you hear famous people are getting, and that **Severe Acute Respiratory Syndrome coronavirus 2 (SARS-COV2)** that doctors and scientists seem to be struggling with are all part of some elaborate fraud.

**Keri Lynn Hilson**, is an American singer, songwriter, vocal arranger, record producer and actress also [tweeted](#);

@KeriHilson; people have been trying to warn us about **5G** for YEARS. Petitions, organisations, studies..... What we're going through is the effect of radiation.

**Brendan Carr** said, there's a virus that is dissipated through person-to-person contact. But he did not provide the **host** of the COVID-19 virus. So where was this virus inhabiting, before the spread?

**Georges C. Benjamin**, executive director of the American public health Association.

**Georges C. Benjamin**

also added an argument to this theory. He said, "**COVID-19 is caused by a virus that came through a natural animal source and has no relation to 5G, or any radiation linked to technology**".

Can't they, just tell us the name of that host? If it came through a natural animal source, what is then, the name of that animal? And why have they not added "restrictions of animal eating" to the COVID-19 safety measures? The answer remains unfolded. For this particular reason, this theory is written.

Here is an American scientist, **Moskowitz Joel M. (PhD)**. Director of the UC Berkeley centre for family and community health. He is an adviser to the International EMF(**electromagnetic field**) Scientist Appeal signed by more than 240 Scientists who publish peer-review research on EMR or **Electromagnetic Radiation**. Last year, he won the James Madison **Freedom of Information Award** for his work that culminated in the state of California publishing the Cell phone radiation safety guidelines.

He has researched disease prevention programs and policies for more than 30 years. He's got a lot more credits which I can't talk about them all, but you can learn more on his website [www.saferemr.com](http://www.saferemr.com).

**Moskowitz** on Oct 27, 2019, said this when interviewed on human radiation (EMR) accumulation; "**There's no reason to believe 5G is safe**".

**Celebrities**, such as John Cusack and Woody Harrelson also posted on Instagram blaming Links Cell Towers as the main cause of the coronavirus. Below is what Woody posted;

**woodyharrels...** 2.2M followers [View Profile](#)

Whatever it is, coronavirus has made the mighty kneel and brought the world to a halt like nothing else could. Our minds are still racing back and forth, longing for a return to "normality", trying to stitch our future to our past and refusing to acknowledge the rupture. But the rupture exists. And in the midst of this terrible despair, it offers us a chance to rethink the doomsday machine we have built for ourselves. Nothing could be worse than a return to normality.

Historically, pandemics have forced humans to break with the past and imagine their world anew. This one is no different. It is a portal, a gateway between one world and the next.

We can choose to walk through it, dragging the carcasses of our prejudice and hatred, our avarice, our data banks and dead ideas, our dead rivers and smoky skies behind us. Or we can walk through lightly, with little luggage, ready to imagine another world. And ready to fight for it.

The truth is hard to tell, indeed. "Power" will kill us all. Woody Harrelson also reposted a text from "The God of small things" novelist, Suzanna Alandhati Roy, on how coronavirus has threatened India and the rest of the country. He said, Roy, condemned data banks and described the pandemic as a portal, a Gateway (access points) between one world and the next.

Let's try to follow the logic here.

**Radiation** is the energy released from an atom as a wave of tiny particles of matter.

The antennas contained in mobile phones, or smartphones, emit radiofrequency (RF) radiation (non-ionizing "radio waves" such as microwaves); the parts of the human head or body nearest to the antenna can absorb this energy and convert it to heat. Radiation sickness is caused by exposure to a high dose of radiation.

5G is the latest network of wireless technology. It works by producing a type of energy called electromagnetic radiation. It uses higher frequencies than previous wireless networks, making it faster and more efficient. Now, the higher the dose of radiation to the human body, the higher the risk.

A small 2017 study, by the World Health Organisation (WHO), showed that mobile phones use frequencies of 1.8 - 2.2GHz. And these frequencies cause **tissue heating**.

Tissue heating occurs when your skin absorbs electromagnetic energy(radiation). Below are possible symptoms of tissue heating;

- . [Nausea and Vomiting](#)
- . [Fever](#)
- . [Headache](#)
- . [Diarrhoea](#)
- . [Dizziness and Disorientation](#)
- . [Weakness and Fatigue](#)
- . [Bloody vomit and stools from internal bleeding](#)
- . [Hair loss](#)
- . [Infections](#)
- . [Low blood pressure.](#)
- . [Breathlessness with activity or even at rest.](#)
- . [Cough while lying down.](#) Etc.

If **high-band 5G** uses frequencies of **25GHz–39 GHz**, we can now imagine the damage it can cause to the body cells and the DNA. And old people are the most vulnerable, because of their weak immune systems.

The statistics is clear; check below.

Adoption of **5G** technology has accelerated faster than any previous mobile technology, commercial 5G networks have been deployed in **61 countries** worldwide, representing an 80 per cent increase since January 2020.

The top three countries that have the most cities with 5G are China at **341**, the United States at **279**, and South Korea with **85**. The U.K. now has 5G in **54** cities, followed closely by Spain with 53.

An additional **27** countries added commercial 5G deployments last year, including three countries that have already reached the top ten in terms of cities covered – Canada with **49** cities, as well as France and Thailand tied at **24**.

The more the adoption of **5G towers** by countries, the more we are prone to radiation menaces.

Let me chip in with how **Cell phones** work.

When you make a call, you've got a **radio** and a **transmitter**. It transmits a signal to the nearest cell **tower**. Each Cell tower has a **geographic cell**, which can communicate with cellphones within that geographic region.

Then, the Cell tower communicates with a switching station, which then searches for whom you are trying to call, and it connects through copper cable or fibre optics or, in many cases, a wireless connection through microwave radiation with a wireless access point. Then, that access point will send a signal to a cell tower within the region of the receiver. And so forth.

The **US Environmental Protection Agency (EPA)** stated this on its website: "non-ionizing radiation is not strong enough to directly affect the structure of atoms or damage DNA".

But that doesn't mean RF(Radio Frequency) is always completely harmless. Because non-ionizing radiation does cause atoms to vibrate, and hence, cause them to heat up.

Countries with more people are more likely to have more 5G towers. Because more people means more telecommunications demand. Such locations are also more likely to have a greater number of COVID-19 cases.

5G uses higher frequencies to make communication faster and more efficient. The accumulation of these high frequencies(eSmog) by the human body is equally fatal, as the so-called COVID-19 coronavirus.

The fast-growing global world demands equivalent technologies to harmonize the pace. The fact is; some countries are shifting from human services to robotics, for higher productivity and accuracy. So we shouldn't be surprised, a body of researchers are defending the **5G** network. Like the **Tobacco**; promoted guidelines have been adopted by the **FCC** (federal communications commission) and by the **ICNIRP** (the international equivalent of the FCC), which the **WHO** relies upon. Believe me or not, there are strong parallels between what the **Telecom** company has done and what the **Tobacco** company has done, in terms of marketing and controlling messaging to the public. In the **1940s**, **tobacco** companies hired doctors and dentists to endorse their product to reduce public health concerns about smoking risk.

The **CTIA** currently uses a nuclear **physicist** from **academia** to assure policymakers that microwave radiation is safe. The **Telecom** industry not only uses the **tobacco** playbook, it's more economically and politically powerful than the **Big tobacco** ever was.

Whether or not, **5G** is the cause of COVID-19 coronavirus, it's equally fatal and we must be cautious. On Nov 6, 2020, China successfully launched an experimental test satellite with candidates of **6G**(Sixth generation) technology into orbit with 12 other satellites.

We create our own demons, so **God** shouldn't be blamed for any catastrophes. **6G**, will mean; more higher frequencies and that will not sound good. **COVID-19** coronavirus has come to stay, just as, it has been admitted that **5G** is inevitable.

If you can't live without something that can kill you, you find a means to stay with it, without allowing it to kill you. The future looks promising with the growing of technology, but many of us, may not live to witness the transformation in the next decade.

Research also shows; the one who created the demon(satan), also created the Angel. Now we know our demon, so find your Angel.

Everything is in book. It's only kept for the wise to discover.

May God help us all.
